# Message: from the President of BioNatural Healing College (BNHC)

Greetings!

First and foremost, I am extremely thankful to Almighty God for granting me this opportunity to present the BioNatural Healing College E- Magazine to our dear readers. Also, I would like to thank you all especially those that are our dear readers that send us their valuable feedback and support. The information provided is for educational purposes only.

We hope this BNHC- E Magazine will be useful to you based with the efforts and dedication of many other researchers and colleagues around the globe. Thanking and wishing you all have the best health and prosperous life.

Best regards,  
Dr. Nadir Sidiqi Ph.D.

# BioNatural Healing College

**BioNatural Healing College** Hope you and your loved ones are staying healthy and safe during this pandemic (COVID-19). What we need to do especially during this uncertain time as follows:

1. Sanitation and Isolation from Social Interaction.
2. Positive Attitude will Increase the Power of Mind and Immune System.
3. Healthy Diet and Drink Plenty of Water (Honey with green tea, vitamin C), Get Enough Sleep.
4. Exercise (any type of physical activity for 30 minutes daily).
5. A Lot of Prayer to Almighty God (be patient, calm).

**May Almighty God bless, guide us all (Humanity) and grant us the ability to find a cure for the prevention of COVID-19.**

## Interview with Dr. Aziz Kamali Professor of University of California Davis, School of Medicine as well as Internal Medicine Physician Practicing in Stockton, California.

By: Dr. Nadir Sidiqi Ph.D.

It is a pleasure an honor on behalf of BioNatural Healing College (BNHC), for the opportunity to have an interview with Dr. Aziz Kamali, therefore, the following are interview questions (Q) and Dr. Kamali's responses (R).

**(Q):** I thank you, Dr. Kamali, for the acceptance of our request to have an interview with you. As a dedicated physician as well as a dedicated and respected cousin I am familiar with your accomplishments. However, let me introduce you to BNHC E-Magazine readers to know about you, Dr. Aziz Kamali has dual Board Certification in both Internal Medicine and Geriatric Medicine along with the most prestigious awarded as a Fellow of the Royal College of Physician of Edinburgh, Scotland. Dr. Kamali also hold the honor of Fellow of the American College of Physicians, Associate Fellow of the American College of Cardiology, Associate Clinical Professor for the University of California, Davis School of Medicine and the California North State University of Elk Grove. Dr. Kamali's tireless dedication of promoting health and well-being for the community through his local clinic in Stockton, California.

**(Q):** As we know that we are in uncertain time due to COVID-19, what is your thought and experiences to share this COVID-19 pandemic with our readers?

**Dr. Kamali response (R):** --Many thanks for the invitation and opportunity to participate in this interview and talk about COVID-19 pandemic. It's only prudent to shed some light on coronavirus as whole. There are 5,000 species of viruses in the world; the main host is the bat. Bats are immune to this infection. Regular coronavirus usually resides in lower temperatures. In humans, it likes to reside in the upper part of the body where the temperature is typically lower than the rest of the body. The normal temperature in humans is 98.6 F (37 degree Celsius). In upper airways, it is between 35-36 degree Celsius. Low temperature is where the regular coronavirus thrives, causing regular flu-like symptoms like runny nose, sore throat, and aches and pains for a few days. For the coronavirus to attack the body, it needs to complete its cycle in intermediate animal, or another vertebrate such as snake, camel, etc. in the history of humanity, the first time a coronavirus (SARS: Severe Acute Respiratory Syndrome) was transmitted from bat to civet cat in 2003 in China. Civet cats are sold in wet markets in restaurants openly in China.

After completing its cycle, in civet cat, it spilled over to humans causing severe acute respiratory Corona 1 disease inflicting 8,000 people killing more than 700 people. The second time Corona attacked humans was in 2012 in Saudi Arabia. Corona was transmitted from bat to camel where it completes its cycle to become more adaptable to human temperature. Then spilled over to humans, causing the MERS (Middle East Respiratory Syndrome) 2,500 people were affected, and the mortality was 777. In December of 2019, Corona attacked pangolin where it completed its cycle before it became virulent for humans, this happened in Wuhan China. Where it gets its name Covid-19. It became classified as a pandemic in February 2020, afflicting over 3 million with over 213,000 deaths.

**(Q):** As I know you as a physician with many years of experience in Stockton, California, could you please tell us the current situation of COVID-19 in California and what strategies the hospital taking when COVID-19 patients are admitted as far concern medication and treatment?

**Dr. Kamali response (R):** In California over 46,000 are inflicted, and over 1,800 deaths have been confirmed. The main distinction between Corona and other viral diseases are the following: 1. Corona after completing its cycle in intermediate animals and entering the human body it activates ACE-2 (Angiotensin-converting enzyme attached to the outer surface cell membranes of cell in the lungs, arteries, heart, kidney, and intestines with main function lowers blood pressure), which causes vasodilation like septic shock syndrome in the body, dropping blood pressure, decreasing blood supply to vital organs such as heart, lungs, kidney, and brain. 2. It activates Cytokine in the body, which further exacerbates vasodilation and worsens perfusion to all vital organs. It also activates Interleukin 1,6,12, which further exacerbates vasodilation and diminishes the immunity of the body. It also activates phospholipids and anti-lupus coagulants like syndrome causing blood clots and thrombosis. Which further exacerbates and worsens blood supply to vital organs. We have two types of cells and alveoli of our lungs (Type 1 and type 2). Type 1 is responsible for carbon dioxide and oxygen exchange, and type two makes surfactant which prevents the collapse of alveoli. Coronavirus attacks type two cells in the lungs preventing synthesis of surfactant causing collapse of alveoli cells which leads to severe hypoxemia. Predisposing factors are advanced age, previous lung disease such as COPD (Chronic Obstructive Pulmonary Disease), cancer, heart failure, liver cirrhosis, chronic kidney disease, AIDS. In Italy, the mortality was very high in octogenarians (people from 80 to 89 years old). The incubation period is between 4-14 days. It can reside on a surface at home from several hours to several days. On cardboard for several hours, on copper and iron for several hours as well. If a person with COVID-19 sneezes or coughs any person who comes in contact with the affected area could catch COVID-19 for up to three hours.

There is no definitive treatment for this condition yet, in the early part of April CDC recommended hydroxychloroquine 400mg twice a day on day 1, and then 400mg daily for 5 days total. Remdesivir has shown efficacy. This medication was given intravenously to fifty-three patients in three different countries, twenty-two in the United States, twenty-two in Europe and Canada, and nine in Japan. with the remarkable improvement shown in thirty-six patients with improvement to Oxygen support class, including 17 of thirty patients receiving mechanical ventilation. (68 percent). A total of twenty-five patients (47 percent) were discharged, seven patients (13 percent) died. Mortality was eighteen percent. (New England Journal of Medicine, April 10, 2020).

**(Q):** What advice do you have for the prevention of COVID-19 to our readers around the world, especially those in developing countries?

**Dr. Kamali response (R):** Wash hands for more than twenty seconds, social distancing. Avoid contact with other humans such as handshakes, hugging, and kissing. Avoidance of sharing Hookah, (hookah types hubble-bubble, or argileh). Avoid sharing cigarettes. Cover all sneezes and coughs Stay home as much as possible, and try to not go out for anything besides necessities. The availability of definitive medication and vaccines is not feasible due to the cost and requiring high financial and economical status. Personal hygiene and cleanliness are highly recommended.

I hope I provided some pertinent information regarding COVID-19.

**(Q):** I thank you for taking time from your busy schedule to have an interview and share your valuable information with the readers of BNHC E-Magazine.

## By Prof. Rosalie Stafford

# Mercury (Part 4): A Highly Toxic Substance in Over-the-Counter Drugs & in Vaccines

This is the fourth article in a series investigating the health impacts of Mercury (Hg). In the last three issues of Bio-Natural Healing College's internet magazine (February, March, and April 2020), we learned that Mercury in every form is a highly toxic heavy metal, and that two organomercurials-- ethylmercury and methylmercury --- are responsible for chronic health

problems in the vast majority of Americans. This month (May 2020), we continue our discussion of thimerosal, a very controversial compound which metabolizes into ethylmercury, and which is in large part responsible for America's epidemic of autism.

### Thimerosal: Haz-Mat or Safe Medicine?

Lisa K. Sykes, a mother whose child who suffered severe neurological damage after receiving a vaccination containing thimerosal, notes that because of their high Mercury content, unused vaccines containing thimerosal “are considered hazardous waste and, if not injected into patients, discarded vials of these mercury-preserved vaccines, therefore, must be disposed of in steel drums, by law.”

Thimerosal is too toxic to go into a landfill but is safe enough to be injected into pregnant women, infants, and children — as well as into the general population, including old folks who are urged to “get your yearly flu shot.” Every year, millions of Americans are injected with a toxic substance which is literally illegal to toss into the trash and which, by law, much be sequestered in Haz-Mat steel drums?

How many recipients of thimerosal have any inkling of what they are accepting into their bodies and the long-term, chronic damage thimerosal does to them? Remember: Mercury is toxic in every form, and no amount of Mercury, no matter how small, is safe.

Dr. David Geier is a renowned expert on the subject of what has come to be known as *vaxx*. Dr. Geier tells us: Thimerosal has been marketed as an antimicrobial agent in a range of products, including topical antiseptic solutions and antiseptic ointments for treating cuts, nasal sprays, eye solutions, vaginal spermicides, diaper rash treatments, and perhaps most importantly as a preservative in vaccines and other injectable biological products, including Rho(D)-immune globulin preparations, despite evidence, dating to the early 1930s, indicating thimerosal to be potentially hazardous to humans and ineffective as an antimicrobial agent.

Thimerosal remained in American pharmaceutical products until the 1980s when, by order of the FDA, thimerosal began to be withdrawn. While thimerosal (Merthiolate, a big money-maker for its patent-owner Eli Lilly) was being slowly dialed back, merbromin (Mercurochrome, not a big money-maker) was simply removed from the marketplace by the FDA.

Focusing on ophthalmic use of thimerosal, Dr. Geier notes that until the FDA ban, nearly all contact lens solutions contained thimerosal, even though it was known to cause blindness:

In some patients, thimerosal caused visible accumulation of mercury in the retina and chronic eye irritation. In a few highly sensitive people, the Mercury-based additive caused loss of sight. Nevertheless, manufacturers continued to add it to contact lens solution for many years. (Geier)

In the 1980s, the FDA began the slow phase-out of thimerosal in contact lens solution.

However, the ban on thimerosal in contact lens solutions did little to eliminate its use in other products, such as eardrops and nose drops. Thimerosal continues to be used today in a variety of health-related products: for preserving vaccines and intramuscular injections, cosmetics, and some drugs that must be kept in solution. (Geier)

Even though thimerosal was gradually eliminated from some (but not all or even most) topical OTC consumer items; the Mercury-based substance — which is known to metabolize to ethylmercury — continues to be allowed as a preservative in cosmetics and vaccines.

Yes, even while thimerosal was being phased out of as a contact lens solution because it was known to cause blindness, the use of thimerosal was greatly expanded in the immunization schedule for infants and pregnant women. The medical establishment rationale was that thimerosal was needed as a preservative in multi-dose vials of vaccines. The CDC states:

The preservative thimerosal prevents contamination in the multi-dose vial when individual doses are drawn from it. When each new needle is inserted into the multi-dose vial, it is possible for microbes to get into the vial. Receiving a vaccine contaminated with bacteria can be deadly. Thimerosal is used as a preservative in multi-dose vials of flu vaccines and, in two other childhood vaccines, it is used in the manufacturing process.

It must be noted that elite physicians serving the wealthy have no trouble finding single-serving vaccines, whereas pregnant women, children, and the elderly who are “ordinary people” doctored by “ordinary medical workers” routinely receive a dose of Mercury in their vaxx. Dr. Mehl-Madrona points out that symptoms of mercury poisoning are very similar to the symptoms of autism. It is not surprising that Mercury, a potent neurotoxin, causes organic brain damage ranging from autism to Alzheimer’s disease.

## Weasel Words

The CDC, the AMA, and your regular M.D. assert that thimerosal is perfectly safe because it “clears out of the blood” in just a few days. While it is true that a small amount of the ethylmercury in thimerosal is excreted within days, medical authorities know very well that most of the ethylmercury contained in thimerosal quickly travels to your brain, where bioaccumulates. The simple fact is: ethylmercury which is sequestered in your brain cannot be measured in blood tests, and “researchers” who claim thimerosal is perfectly safe because it “clears out of the blood” in just a few days are cynically misrepresenting the truth. In popular parlance, they are speaking “weasel words.” Despite the fact that single-dose vials of vaccine are made without thimerosal, the vaxx industry has chosen to push multi-dose vials and lace the vaccines with Mercury. Their rationale? Spokesmen for the vaxx industry claim that multi-dose vials are much more economical than single-dose vials. That is simply not true: the per-injection cost difference is less than 10%. For the price-difference of a few pennies, pregnant women and women of child-bearing age (as well as elderly people) are urged to get the thimerosal-laced flu shot — in other words, to take a nice big hit of ethylmercury. Remember Minamata Disease? (We covered it two months back, in the February issue of Bio-Natural Healing College’s internet magazine.) The horrific tragedy of Minamata taught us that the fetus was more vulnerable than the adult: while gestating, infants bioaccumulated the methylmercury circulating in their mothers’ bodies. Because of this biomagnification, untold numbers of babies were born with *congenital Minamata disease*, the symptoms of which include profound neurological injury — severe mental deficiencies, including autism. Dr. Mehl-Madrona points out that symptoms of Mercury poisoning are very similar to the symptoms of autism: it is certainly conceivable that Mercury poisoning —

known to cause severe neurological damage — is not merely similar to autism but actually *causes* autism.

On 9 March 2020, the very day I wrote the above words, ICAN (Informed Consent Action Network) published activist Del Bigtree’s breaking news that the CDC had “admitted in a federal lawsuit that it has no scientific studies to support its claim that vaccines given to infants don’t cause autism.” For decades, the CDC has applied the label “conspiracy theorist” to anyone — including scientists — who has pointed out the causal relationship between the neurotoxin thimerosal and organic brain damage. At long last, the CDC has admitted that, while numerous case studies reveal the direct causal relationship between Mercury and neurological damage (to not just the nervous system but also the brain), there exists not a single study which proves that vaccines containing thimerosal (ethylmercury) do not cause organic brain damage resulting in autism. If there were such a scientific study, the CDC would have cited it. Instead, the CDC lost the lawsuit in federal court because, in the ninety years that thimerosal has been added to vaccines, its safety has never been proven. Instead, for the past thirty years, vaccine-makers have enjoyed legal immunity and parents of children damaged by Mercury-laden vaccines have had recourse to the little-publicized “secret vaccine courts” which exist to recompense vaccine victims. More on that later...The legal breakthrough just accomplished by ICAN must be applauded by any who are interested in good health. Despite years of asserting that vaxx could not possibly be in any way responsible for the epidemic of autism afflicting American babies (especially boy babies) and despite heavy internet censorship of people who point out the proven relationship between Mercury and brain damage, the CDC has finally been forced to admit that its claims regarding the safety of its mandated-vaccines ... are simply lies. At this point, I must note that the CDC is in no way an impartial scientific organization devoted to public health. Quite the contrary! For, in actuality, the CDC (although generously funded by taxpayers) also solicits and accepts cash donations from Big Pharma — even while the CDC is engaged in publishing guidelines specifically promoting the products of the pharmaceutical companies which profit from the drug sales driven by CDC guidelines (Susan Perry). This type of practice is known as *taking kickbacks* ... clearly, it is unethical and, when it results in actual harm to a member of the public, it is immoral and, I would argue, illegal.

Compounding the criminality is the “revolving door” relationship between the CDC and Big Pharma: it is common for pharmaceutical industry executives to take high-level positions at CDC, and vice versa. Steven Hooker points out that one bureaucrat left his position as director of the CDC (which purchases \$4 billion worth of vaccines annually) to become CEO of Merck’s vaccine division. That is but one of numerous examples of the revolving door between Big Pharma and the CDC.

It all reeks of the stench of corruption

**Autism, a New Syndrome:** The term *autism* was coined in 1948 when Dr. Leo Kanner used it to describe children who were unable to interact socially with even their closest family members or caregivers and who were robotic in their obsessive desire for routine and extreme aversion to variety. Kennedy says: The disease [autism] was unknown until 1943, when it was identified and diagnosed among eleven children born in the months after thimerosal was first added to baby vaccines in 1931. A century ago, autism was extremely rare. Suddenly, after thimerosal is injected into the first cohort of infants, autism is observed in them. Autism is a modern disease, arising in lockstep with thimerosal (Kennedy), a childhood tragedy that has gone from being rare to epidemic (Davis).

Researcher Rina Palta reports that, in 2003, a CDC study investigating rates of autism in Atlanta found a ten-fold increase between the 1980s and 1996. The CDC did not venture to hazard a guess as to the cause of this sky-rocketing incidence of autism, and certainly did not attribute it to Mercury administered to pregnant women and infants. The CDC study found that, in 1987, across the United States of America, autism afflicted one in two thousand children. The next dozen years saw a fourfold increase: in 1999, federal agencies estimated that autism affected one in five hundred children in the USA. In 2005, Palta reported, “Some researchers now estimate 1 in 150 children have *autistic spectrum disorders*” (the term refers to the range of neurological damage from lesser to greater degrees). In 2017, Kennedy reported: Since 1991, when the CDC and the FDA had recommended that three additional vaccines laced with the preservative be given to extremely young infants — in one case, within hours of birth — the estimated number of cases of autism had increased fifteenfold, from one in every 2,500 children to one in 166 children.

It's now 2020, notes Palta, and the incidence of autism spectrum disorders has increased to a staggering 15% of American children.

American children are exposed to Mercury, particularly ethylmercury in thimerosal, both prenatally and postnatally (before-and after-birth). At least fifteen percent of American children suffer neurological damage resulting in a lifetime of cognitive and emotional disability.

*Fifteen percent* means that one out of every six or seven children suffers quantifiable brain damage, with all the personal, societal, and economic effects that come along with that. And don't forget the cultural effects: how many of these children might otherwise have become the twenty-first century counterpart of Tesla or Frank Lloyd Wright? What a tragic waste of human potential because of Mercury-caused brain damage: brain damage which was avoidable because there is no rational reason to inject anyone, especially infants, children, pregnant women, or any woman of child-bearing years, with the vicious neurotoxin known as *thimerosal*.

## Autism is Epidemic in America

There is no doubt but that autism is epidemic in America. Lisa K. Sykes points out that any epidemic is a result from either an infectious agent or a widespread toxic exposure and that autism is due to the latter. When autism was first noted, psychiatrists claimed it was the result of "bad mothering" and that "cold, unfeeling mothers" caused the tragedy. It wasn't until 1965, when the psychiatrist Bernard Rimland — himself the father of an autistic child — published a book positing a biological rather than psychological origin of autism.

About 45 years ago (in the mid-1970s), I had a friend named Patsy, a generation older than me. (She is now deceased.) Patsy had an autistic daughter. The girl, a teenager, had been institutionalized for years as her parents simply could not control her wildly destructive outbursts. Patsy, a warm-hearted and sensitive woman who had other "normal" children, told me that her daughter's doctors insisted that she — Patsy — was the reason her daughter was autistic, that it was her "cold and unloving personality" that had destroyed her daughter's psyche. All mothers of autistic children were blamed for their babies' neurological damage ... while the true culprits, the leaders of the vaccine industry, continued profiting from their crimes against humanity.

Science now tells us that autism is not a psychological syndrome but is actually a form of neurodevelopmental damage that is caused by environmental agents, particularly Mercury (Geier; Olmsted and Blaxill). The message of Minamata is incontrovertible: Mercury toxicity causes severe neurological damage, and the results are most pronounced when an organomercurial is administered to fetuses, infants, and children, either inadvertently, like methylmercury in seafood as was done at Minamata, or deliberately, like ethylmercury in vaxx as is done every day in America. Before 1989, American preschoolers received eleven vaccinations — for polio, diphtheria-tetanus-pertussis and measles-mumps-rubella. A decade later, thanks to federal recommendations, children were receiving a total of twenty-two immunizations by the time they reached first grade. As the number of vaccines increased, the rate of autism among children exploded. (Kennedy)

There is a direct causal relationship between organomercurial vaxx and autism. Verstraeten's monumental analysis of the CDC's own data base proves that fact. As with methylmercury, ethylmercury readily passes both the placental barrier and the blood-brain barrier (Greenfact). If ingested during pregnancy, babies develop Congenital Minamata Disease; if ingested during infancy, babies develop autism spectrum disorder. Organic mercury is the most deadly of the mercury compounds, probably due to its ability to enter the cells almost effortlessly. Within the cell it can destroy the various components selectively or in total by releasing lysosomes, damaging DNA and by rupturing the cell membrane. (Davis)

Mercury is forever: it bioaccumulates and increases in relative toxicity. Mercury, even in trace amounts, is toxic, causes not only severe neurological damage but also DNA damage. The only reason that this irreversible mutagenic effect is not more evident is that, for cultural and sociological reasons, autistic persons nearly never reproduce. A 1968 study found that, for as long as four years after maternal exposure, ethylmercury easily crosses the placental barrier into human fetuses and into breastfeeding children (Children's Health Defense); thus, the flu shot that an unmarried woman gets when she is 21 years old can poison her breastmilk when she is 25 and nursing her first baby. In 1983, researchers A. Léonard *et al* found that thimerosal passes more easily from a mother's bloodstream through the placenta into a developing baby than does methylmercury.

That observation bears repeating: in 1983, Léonard *et al* found that in comparing the relative toxicity of ethylmercury and methylmercury, a child in the womb will more readily be poisoned by ethylmercury than by methylmercury, because thimerosal passes more readily from a mother's bloodstream through the placenta and thence through the fetus' blood-brain barrier where the neurotoxin immediately begins damaging the developing brain. Last month, we looked at the Rfd for methylmercury. Regarding a flu shot, Children's Health Defense points out that: A single thimerosal-preserved flu vaccine contains 25 micrograms of ethylmercury. If the EPA RfD for ingested methylmercury is applied to this injected ethylmercury figure, an individual would have to weigh more than 250 kilograms (551 pounds) for the 25 microgram exposure to be considered safe. [Moreover] newer research supports older data that "safe" levels of ethylmercury exposure might indeed be lower than the EPA's RfD. A 2012 Italian study, for instance, showed that ethylmercury-containing thimerosal diminished the viability of human cells in the lab at a concentration one-fiftieth that of methylmercury.

Mercury is toxic in any amount. Yet the medical establishment urges women of child-bearing age and children to be injected with thimerosal-containing vaxx!

"A recent study of 1700 women in the USA," notes GreenFacts, "found that about 8% of them had Mercury concentrations in their blood and hair exceeding the levels that correspond to the US EPA's estimated safe dose." It is a miracle that autism-spectrum rates are not higher than the current 15% of American children.

Prof. Boyd Haley, retired chairman of the chemistry department at the University of Kentucky, states:

You couldn't even construct a study that shows thimerosal is safe. It's just too darn toxic. If you inject thimerosal into an animal, its brain will sicken. If you apply it to living tissue, the cells die. If you put it in a petri dish, the culture dies. Knowing these things, it would be shocking if one could inject it into an infant without causing damage. (Kennedy)

Shocking, indeed. And tragic. And infuriating ... when you know that Big Pharma and the American government is well-aware of the damage and its chemical cause.

## The Cover-Up: The Conspiracy to Commit Medical Malpractice

The CDC's massive data on over a hundred thousand infants born between 1991 and 1997 was analyzed by CDC epidemiologist Thomas Verstraeten, MD, who proved unequivocally that thimerosal exposure was associated with a very high risk of autism (Brian Hooker) as well as speech delays, sleep disorders, attention-deficit disorder, hyperactivity, and related symptoms of neurological damage (Kennedy).

In 2000, Dr. Verstraeten informed CDC officials of his findings. The CDC was alarmed by Dr. Verstraeten's monumental review of thousands of cases which proved that the twentieth-century epidemic of autism was closely related to thimerosal administered in their vaccines (Jake Crosby).

The CDC's response? The agency immediately convened a secret meeting, "the Simpsonwood conference which brought together government public health officials, vaccine manufacturers and professional medical associations" (Kennedy). Those attending the meeting urgently agreed that Verstraeten's study had to be suppressed and replaced with a new study which presented toxic vaxx in a good light: The CDC paid the Institute of Medicine to conduct a new study to whitewash the risks of thimerosal, ordering researchers to "rule out" the chemical's link to autism. It withheld Verstraeten's findings, even though they had been slated for immediate publication, and told other scientists that his original data had been "lost" and could not be replicated. And to thwart FOIA, the Freedom of Information Act, the CDC handed its giant database of vaccine records over to a private company, declaring it off-limits to researchers. (Kennedy)

Thus Verstraeten was muzzled and his work buried. Big Pharma was protected. Evidence of the Cover-Up

In a 2010 interview, David Kirby, author of the 2005 award-winning bestseller *Evidence of Harm: Mercury in Vaccines and the Autism Epidemic: A Medical Controversy* told reporter Steven Higgs:

I first got interested in vaccines and autism and that whole controversy back in 2002, in November, when the House of Representatives passed the Homeland Security Bill that created the Homeland Security Department.

Tucked away in that bill, in the middle of the night, was a secret rider that would have dismissed all lawsuits against vaccine makers for having put this substance called thimerosal, a mercury-based preservative, in vaccines given to children, with the idea that that may be causing autism.

Does it surprise you that the CDC and the House of Representatives would conspire to protect Big Pharma from the horrific effects of thimerosal? Why would men and women, many of whom have children and grandchildren of their own, do such evil?

For the answer to this question, you need look no further than the vast amounts of campaign donations which Big Pharma contributes to politicians (both Democrat and Republican) and the “research” grants and outright gifts (also known as bribes and kickbacks) which Big Pharma provides to various agencies and institutions.

Money makes the world go ‘round ... if you live in the sphere of the corrupt politicians and policy-makers.

### The Secret Vaccine Courts

As earlier mentioned, federal law completely protects the vaccine industry from being sued for the verifiable damages resulting from their hazardous products. Instead, the only recourse which parents of damaged children have is via the federal system known as *secret vaccine courts*. In the next issue of Bio-Natural Healing College’s internet magazine, we will continue our exploration of Mercury by examining the secret vaccine courts which exists to protect Big Pharma’s vaccine industry.

Until then, know that my prayers are with you, and that you, your loved ones, and your community remain healthy, safe in the protection of the Almighty, Who created the world and gave us nutritious, colorful foods, full of life-force and the intrinsic ability to heal us.

**Mission:** BioNatural Healing College is a non-profit public benefit institution that has tax-exempt status under the Internal Revenue Service, Section 501(c)(3) of the United States of America. Our goal is to offer a high-quality education a diploma program as well as holistic health and nutrition conferences, seminars, workshop, and continuing education. The focus of these educational programs is to offer healing and holistic nutrition science through online distance learning. These dynamic online education programs will provide diverse adult learners throughout the world the experience of enhancing their quality of life, their health, and their happiness.

**Vision:** The faculty, staff and management team of BioNatural Healing College are passionately committed to providing the best teaching possible in this field. We seek to encourage, motivate and explain the importance of this field to prospective students so that they may make an informed decision regarding enrollment. We seek an ultimate goal of satisfaction for the student based on responsibility, commitment, respect, awareness and sustainable education for society.

**Accreditation and Recognition:** BioNatural Healing College is based in California. It is an institution that has the goal to deliver on- demand online distance learning around the globe. This education is of high quality and vocational in nature. BioNatural Healing College is a legal business entity that has been approved to operate by the State of California's Bureau for Private Postsecondary Education that set forth in the educational code. BioNatural Healing College is not accredited by the United States Department of Education. BioNatural Healing College is a member of the American Holistic Health Association (AHHA).

**BioNatural Healing  
College**

## **Online Distance Learning Based In California, USA**

**BNHC** is a convenient way to earn your diploma. **BNHC** offers 5 diplomas under highly qualified professors. Time is a precious gift to every person, apply now!

### **DIPLOMA PROGRAM (30 CREDITS PER DIPLOMA):**

- 1. BioNatural Pest Management (Diploma)**
- 2. Herbal Science and Master Herbalist (Diploma)**
- 3. BioNatural Health Practitioner (Diploma)**
- 4. Holistic Health Practitioner (Diploma)**
- 5. Nutrition and Brain Function Consultant (Diploma)**
